

PITCH YOUR VIDEO GAME FOR INVESTOR FUNDING

I'm Yan DOSSOU-LOKO, a first-year student at Epitech and also a video game creator, and I'm here to introduce you to the game that my team and I are currently working on.

Who is my team made up of?

My team is composed of a programmer (me), a 3D and 2D designer, a screenwriter and a salesperson.

What is our game about?

Our game will aim to address the different aspects of the history of our wonderful country that is Benin, still, unfortunately, quite unknown in the world. To do this, we aimed to make an RPG-type video game like the game "*Genshin impact*" with the aim of allowing foreigners to know the important aspects of our culture and to discover life in Benin through quests and games. We offer them a fun and informative adventure that will make them discover Benin in all its splendor.

But what kind of game is Genshin impact?

Created by miHoYo Co., Ltd. (In Chinese: Shanghai miHoYo Network Technology Co., Ltd or more simply miHoYo; pinyin: mǐhāyóu wǎngluò kējì gǔfèn yǒuxiàn gōngsī) which is a Chinese video game development and animation studio based in Shanghai. The game premiered on Android, iOS, PlayStation 4, and Windows on September 28, 2020 at 2:30 a.m., on PlayStation 5 on April 28, 2021, and on Xbox Series on November 20, 2024. *Genshin Impact* is set in the fantasy world of Teyvat, which is home to seven nations, each inspired by a real country and culture, linked to a different element, and ruled by a different god (also called Archon). The story follows the Traveler, who traveled countless worlds with his twin sister/twin brother before being separated in Teyvat. The Traveler then travels in search of the lost sister/brother with his companion Paimon and engages in the affairs of the nations of Teyvat. Depending on the sex chosen, the twin will be the opposite. The game features an anime-style open-world environment and an action-based combat system using elemental magic and character switching. The game is available as a free-to-play game and monetized by a gacha mechanic through which players can obtain new characters and weapons. The base game is regularly improved with patches using the video game as a service model. During his journey the traveler will meet many people, both good and bad, who will teach him many new skills that will then be useful in his journey. Through mythical and fantastic adventures and events that occur periodically, the traveler learns more about the history of the different nations he travels through. The game has a historical mode, a quest mode of all kinds and can even be played with others thanks to its multiplayer mode that it unlocks at adventure level 16. Up to 4 players can join:

- 2-player: each player can play with two characters at the same time;
- With 3 players: each player can play with one character at the same time, except the host of the game who plays two;
- From 4 players: Each player can control only one character at a time.

There is also a chat that allows you to chat with your teammates regardless of their origins or nationality. The game also teaches us that we should not trust just anyone, that everything we seem to know is not always true, that appearances can be deceptive but also and above all that friendships and family ties are very important. Note that the traveler during his quest learns many recipes for delicious dishes. Some dishes restore or resurrect characters, while others increase offensive or defensive abilities. Before its release, the game had more than 10 million registrations, more than half of which were outside of China. According to some, the game was the biggest international release of any Chinese video game. Prior to its release, the game won the public poll at the [Tokyo Game Show](#) Media Awards 2020, ranking first among 14 other games.

Conclusion

In view of all the above, it is easy to understand why Genshin Impact will represent a model for our game. We will allow the "travelers" to cross Benin and learn more about our culture by giving him the opportunity to have our heroes and other famous characters as characters. The game will be multi-platform and accessible to all. This game would also teach the younger generation about their origins and culture since the current generation is more focused on manipulating technology. In this way, we could bring back to life the Beninese culture, the history of Dahomey and the different kingdoms it has inhabited. In addition, given the involvement of Sèmè city in the development of Benin at the global level, we would have hoped for a potential partnership since we do not yet necessarily have everything necessary.
